

How To Use a Stitch Ripper

Equipment Needed

- * Stitch Ripper

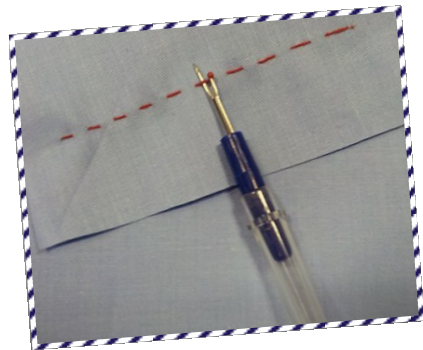

This device is designed to take out unwanted stitches without damaging the fabric.

Step One

Insert the pointed end of the Stitch Ripper underneath the stitch you wish to take out. The red ball should be resting above the stitch.

Step Two

Push the Stitch Ripper through the thread allowing the blade to cut through the thread. Take care to only cut one stitch at a time, as cutting more than one may result in the fabric snagging.

Step Three

Repeat cutting every other stitch then simply pull the thread out by hand.

Step Four

Brush away any loose bits of thread left behind.
