

How To

Thread a needle using a Needle Threader

Equipment Needed

- * Needle
- * Thread to match the garment
- * Needle Threader
- * Sharp Scissors

Step One

Always use a sharp pair of scissors to cut a piece of thread.

Step Two

Never use a really long piece of thread because it will form knots, it is better to use many smaller pieces, about 40cm is a good length.

Step Three

Push the wire section of the needle threader through the eye of the needle.

Step Four

Thread your piece of thread through the wire opening and pull the threader back through the eye of the needle.
